

Contents

Contents of Volume A

Chapter 1. Morphology and Systematics

Chapter 2. Anatomy and Physiology

Chapter 3. Reproduction, Cytogenetics and Development

Chapter 4. Biology

Chapter 5. Aphids and their Environment

Chapter 6. Evolution

Chapter 7. Organization (Structure) of Population and Species, and Speciation

Contents of Volume B

Chapter 8. Techniques

Chapter 9. Natural Enemies

Contents of Volume C

Chapter 10. Damage	1
10.1 The Responses of Plants to the Feeding of Aphidoidea: Principles, by P.W. Miles	1
Conservation of the food resource	1
Factors influencing the specificities of responses	2
Interaction of mechanical and chemical stimuli.	2
Immediate physiological responses.	3
Some uncertainties concerning salivary influence.	3
Phytotoxic reactions: to salivary toxins or depletion of assimilate?.	4
Systemic and localized reactions	5
Cecidogenic redifferentiation	5
The insect as a localized nutrient "sink".	6
Respiratory consequences of a nutrient sink	7
Defensive reactions in galled tissues.	7
Phytotoxic reactions characterized	7
Experimental simulation of natural responses	8
Hormones as cecidogens	8
Amino acids as cecidogens	10
Enzyme systems as cecidogens	10
Enzyme inhibitors as cecidogens	11
Respiratory influences in cecidogenesis	12
Behavioural influences in cecidogenesis	13
Rejection of involvement of neoplasia and microbial intervention	13
Interactions of the responsiveness of the plant with behavioural and chemical specificities of the insect	14
Cecidogenesis seen as a progressive influence on biochemical equilibria	14
References.	16
10.1.1 Specific Responses and Damage caused by Aphidoidea, by P.W. Miles	23
Introduction.	23
Damage caused by nutrient drain	23
Damage related to the sensitivity of the plant	24
Chlorosis caused by aphidids	25
Systemic effects ascribed to aphidid toxins	25
Localized effects ascribed to aphidid toxins.	26
Growth distortions caused by aphidids.	27
Damage by aphidids summarized	27
Galls caused by the woolly aphid of apple	28
Pemphigid galls on <i>Populus</i>	29
Damage by pemphigids to secondary hosts	29
Adelgid galls on spruce.	32
Adelgid attacks on needles and shoots of secondary hosts	34

Attacks by the balsam woolly aphid on its secondary hosts	35
Defensive reactions in woody tissues to the feeding of adelgids	36
Galls of the grape phylloxera	36
Galling by other phylloxerids	40
Galls due to other Aphidoidea.	40
Cecidogenesis summarized	40
References.	42
10.2 Crop Loss Assessment, by P.W. Wellings, S.A. Ward, A.F.G. Dixon and R. Rabbinge	49
Introduction	49
Defining yield and loss	49
Production levels and production systems	52
Production levels	52
Production systems.	52
Injury and damage	53
Assessing crop loss.	54
Laboratory, glasshouse and cage experiments	54
Field experiments	55
Explaining and forecasting crop loss.	57
Conclusions	60
References.	61
Appendix - Production loss attributable to aphids	63
10.3 Viruses Transmitted by Aphids, by E.S. Sylvester	65
Introduction	65
Non-persistent transmission.	65
Potyviruses	67
Potexviruses.	67
Carlaviruses.	68
Multicomponent RNA viruses.	69
Semi-persistent transmission	71
Bimodal transmission.	71
Closteroviruses	72
Caulimoviruses	73
Unclassified viruses	73
Persistent transmission.	74
Luteoviruses.	74
Unclassified viruses	75
Propagative transmission.	76
Plant rhabdoviruses	76
Epidemiology and management of aphid-borne viruses	77
Elimination of virus sources	79
Isolation from virus sources.	80
Crop manipulation	81
Miscellaneous methods	82
References.	83
Chapter 11. Control of Aphids	89
11.1 Chemical Control, by A. Schepers	89
Introduction.	89
Aphids and aphicides.	89
Selectivity.	90
Systemic activity.	90
Residual activity and persistence	90
Rapid action.	90
Low phytotoxicity	91
Application of aphicides	91
Chemical control to reduce direct damage	91
Solanaceae	91
Gramineae.	93
Chenopodiaceae	96
Leguminosae	97
Cruciferae.	99
Compositae	100

Rosaceae	101
Malvaceae.	103
Miscellaneous	103
Chemical control to reduce virus diseases	104
Solanaceae	104
Gramineae.	106
Chenopodiaceae	107
Leguminosae	109
Cruciferae.	110
Compositae	110
Rosaceae	110
Malvaceae.	111
Miscellaneous	111
References.	112
Solanaceae	112
Gramineae.	114
Chenopodiaceae	115
Leguminosae	116
Cruciferae.	118
Compositae	119
Rosaceae	119
Malvaceae.	120
Miscellaneous	121
11.1.1 Resistance to Aphids to Insecticides, by A.L. Devonshire	123
Occurrence of insecticide-resistant aphids	123
The biochemical nature of resistance in aphids	125
<i>Myzus persicae</i>	125
<i>Phorodon humuli</i>	128
<i>Aphis gossypii</i>	128
Karyotype and instability of resistance in <i>M. persicae</i>	129
Detailed studies of resistant populations of <i>M. persicae</i>	131
The future.	134
References.	135
11.2 Biological Control of Aphids, by M. Carver.	141
Definition and scope	141
Some procedures and principles of biological control	142
History of biological control, with special reference to aphids	143
Increased need for biological control	149
Aphids as candidate pests for biological control	151
Population dynamics	151
Limitations of adventives	151
Heteroecy	151
Virus vectors	152
Dispersive vehicles	153
The control agents	154
Multilateral control	154
Multiple introductions	156
Ants	156
The exotic environment.	156
Existent entomophaga	156
Invading species	158
An example: Australia	158
Aphids as controllers of weeds	160
Assessment	160
References.	161
11.2.1 Biological Control in the Open Field, by R.D. Hughes.	167
Introduction.	167
The practice of biological control of aphids	168
Step 1. Characterisation of target aphid and its environment	168
Step 2. Appropriateness of biological control, types of enemy and specific approach	173
Step 3. Selection of the natural enemy	175
Step 4. Import, quarantine procedures, identification and examination	175

	Step 5. Release of natural enemies	177
	Step 6. Establishment.	181
	Step 7. Assessment of impact	183
	The ecological attributes of a successful natural enemy	186
	An analysis of attempts to biologically control target aphid species	187
	Conclusions	192
	References.	194
11.2.2	Biological Control in Greenhouses, by P.M.J. Ramakers	199
	Introduction	199
	Parasitoids	200
	Predators	202
	Fungi	204
	Summary	205
	Acknowledgements.	206

11.3	Modifying Aphid Behaviour, by R.W. Gibson and A.D. Rice	209
	Introduction	209
	Preventing flying aphids from colonizing plants	209
	The effects of light on aphid behaviour	209
	Plant odours and aphid behaviour.	211
	Aphid alarm pheromone	211
	Repelling aphids that have alighted	212
	Aphid alarm pheromone	213
	Other repellent chemicals.	213
	Polygodial.	214
	Carboxylic acids	215
	Host plant resistance.	215
	Effect on behaviour	215
	Host plant resistance and virus control	216
	Effects of aphicides on aphid behaviour and virus spread	217
	Effects on aphid probing	217
	Effects on aphid movement	218
	Conclusions	221
	References.	221
11.4	Host Plant Resistance, by J.L. Auclair	225
	Introduction	225
	Breeding plants resistant to aphids	226
	Screening approaches for detecting resistance to aphids.	227
	Aphid resistance in particular host plants	230
	Leguminosae	230
	Gramineae.	236
	Compositae	243
	Cruciferae.	244
	Cucurbitaceae	245
	Rosaceae	246
	Solanaceae	248
	Miscellaneous host plants	251
	Conclusion	253
	Acknowledgements.	254

11.5	Integrated Control.	267
11.5.1	Integrated Aphid Management: General Aspects, by P. Harrewijn and A.K. Minks.	267
	Introduction	267
	How to reduce aphid numbers.	268
	Control measures in the overwintering stage	269
	Control measures during migration and host-plant finding.	269
	Control during probing and feeding	270
	Control during larviposition and reproduction	271
	References.	271

11.5.2 Integrated Control of Cereal Aphids, by G.W. Ankersmit	273
Introduction	273
Agricultural practice and control	274
Change of sowing date	274
Increase of sowing density	274
Simulation of parasite development by undersowing	274
Manipulation of nitrogen fertilization	275
Breeding for host-plant resistance	275
Use of fungicides	275
Use of insecticides	275
Use of insect pathogens for control	276
EIPPRE: a special case of supervised control of cereal aphids	276
References	277
11.5.3. Integrated Control of Potato Aphids, by P. Harrewijn	279
Introduction	279
Ware potatoes	280
Seed potatoes	281
Concluding remarks	283
References	284
11.5.4 Integrated Control of Aphids in Field-Grown Vegetables, by J. Theunissen	285
Introduction	285
<i>Brevicoryne brassicae</i>	285
Tolerance levels	285
Other elements in IPM	287
References	288
11.5.5 From Integrated Control to Integrated Farming, by P. Vereijken	291
Motivation	291
Integrated farm management	292
Perspectives and recommendations	293
References	295
Epilogue	297
General Index	299
Index to the Aphids	309
Index to the Aphid Parasites/Pathogens	311
Index to the Aphid Predators	314

Plan: Technology of Integrated Farming Systems for Agricultural Cereals, P. Vereijken, Ed., Wageningen, 1992, 296 pp., Dfl. 100.00, ISBN 90-75043-10-0.
